

Server catalog

15 @chkp MCP servers hosted (of 18 upstream) · every credentialed server gets its **own** secret

Management-shaped

DEPLOYED BY DEFAULT

own secret each · chkp/<server>

quantum-management

management-logs

threat-prevention

https-inspection

policy-insights

quantum-gw-cli

authenticates to the Management server (not Gaia)

all six share the same credential fields, separate secrets

Product-specific

own secret each · chkp/<server>

reputation-service

DEFAULT

threat-emulation

DEFAULT

documentation

DEFAULT

cloudguard-waf

argos-erm

spark-management

harmony-sase

workforce-ai

the three DEFAULT ones ship by default; the rest need tenant creds

Interactive-only auth

agent-side secret, not wired to the container

quantum-gaia

agent-side secret · per-gateway login prompt

The Gaia server authenticates only via an interactive MCP login prompt, which the AgentCore Gateway does not relay — so its calls hang through the gateway.

Excluded from the default and from `--servers all`; usable in a direct-server topology (e.g. Claude Desktop).

chkpmcpaws deploy brings up 9 of 15 by default · `--servers` adds any by name · set credentials with `chkpmcpaws creds template` then apply
